Regulated activities in the system and how they are enforced

Description

There are many regulations and regulators involved in the residential building quality and safety system, the MHCLG System Design team created this map to illustrate some of the key activities that come from these regulations. We created it as a tool to help us as a team understand what should be happening in the system according to regulation, and to highlight to others where activities and interactions happen across the life of a building.

The map describes:

- the phases across the design, development and maintenance of a residential building, aligned with our other maps
- key regulated activities including who does them, the phases of the process they happen in, and the acts, legislations or regulations which they've come from
- how these activities can be enforced, including who can undertake enforcement and the acts, legislations or regulations which give them their powers
- some of the activities which are specific to high-risk buildings

This map does not include a complete description of all the activities or regulations involved with the design, development and maintenance of residential buildings. So, you should not use it as a guide to these tasks or complying with regulations.

At this stage, we have not included how different professions are regulated and how this impacts on the activities that take place.

This map was created in February 2025.

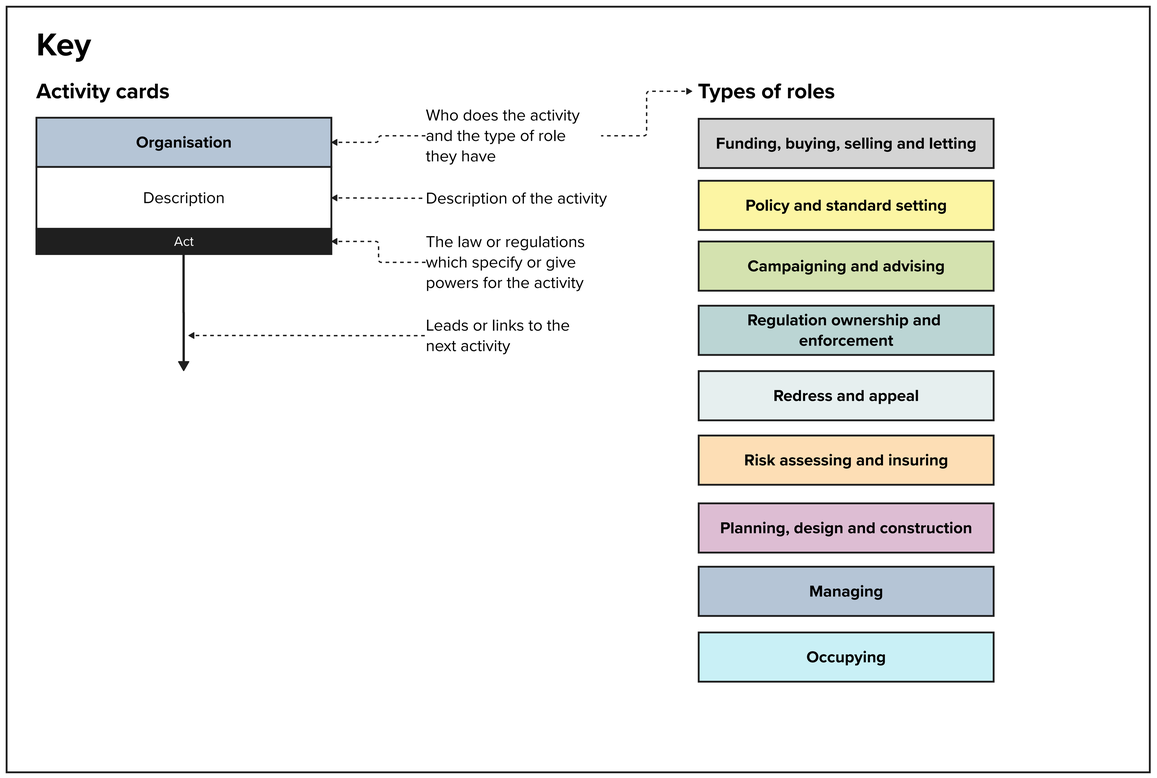
Share your feedback

This is a work in progress. If you spot any errors or identify key activities that are missing, help us maintain the accuracy of the map by emailing us at SystemDesignTeam@communities.gov.uk

How to use this map

The phases of a building's life cycle are listed and described at the top of the map, these run in sequence from left to right. Under each phase you will find descriptions of the related regulated activities and enforcement action that can be taken.

You may need to zoom in to navigate the map.



Regulated activities in the system and how they are enforced

Phase | **Description** | **Regulated activities** | **Enforcement of those activities**

Design

Description: In one word, the **Design** phase is multidisciplinary team work towards the safety, sustainability and quality of their work as it fits with the retrospective, prospective and prudent duty of care. Design is a process of problem solving and decision making, with the aim of producing a set of documents, drawings and specifications, allowing an informed and appropriate for their scale.

Regulated activities:

- Regulated surveyor
- Architect
- Chartered surveyor
- Chartered building surveyor
- Chartered town planner
- Chartered landscape architect
- Architects
- Surveyors
- Planners
- Planning officer (PO) or Planning officer (PO) in charge
- Planning officer (PO) in charge (Scotland)
- Planning officer (PO) in charge (Wales)
- Planning officer (PO) in charge (Northern Ireland)
- Planning officer (PO) in charge (London)
- Planning officer (PO) in charge (Isles of Scilly)
- Planning officer (PO) in charge (Dartmoor National Park)
- Planning officer (PO) in charge (Exmoor National Park)
- Planning officer (PO) in charge (Lake District National Park)
- Planning officer (PO) in charge (Yorkshire Dales National Park)
- Planning officer (PO) in charge (Broads Authority)
- Planning officer (PO) in charge (Pembrokeshire Coast National Park)
- Planning officer (PO) in charge (Snowdonia National Park)
- Planning officer (PO) in charge (Brecon Beacons National Park)
- Planning officer (PO) in charge (Cairngorms National Park)
- Planning officer (PO) in charge (Loch Lomond and The Trossachs National Park)
- Planning officer (PO) in charge (New Forest National Park)
- Planning officer (PO) in charge (South Downs National Park)
- Planning officer (PO) in charge (Peak District National Park)
- Planning officer (PO) in charge (Northumberland National Park)
- Planning officer (PO) in charge (Norfolk and Suffolk Broads
